

Report Name : Workday Summary
Position : In Reports > After Daily Work Detail

Keep this report deliberately **operational rather than analytical**. It should answer one question quickly: **“How did I / my team actually spend the workday?”**

Workday Summary Report

1. Report Purpose

Provide a simple day-wise view of **attendance, available working window, planned/unplanned work, actual work and focus discipline**.

Visibility:

- Resource → Self only
- Resource Owner (RO) → Self + all direct and indirect reportees
- Visibility must follow the reporting hierarchy applicable to the selected/report date.

2. Report Columns

#	Column	Definition / Calculation
1	Work Date	Working date
2	Employee	Resource name
3	Day Start	Recorded Day Start time
4	Lunch Start	Recorded Lunch Start time
5	Lunch End	Recorded Lunch End time
6	Day End	Recorded Day End time
7	Office Time	Day End – Day Start
8	Productive Window	Office Time – Lunch Duration
9	Allotted Work Hrs	Total Planned work hours originally given for the day by RO
10	Focus Hrs	Total time captured through Task Timer / focused work sessions
11	Actual Hrs	Total actual work hours posted against Planned and new Unplanned work
12	Focus %	Focus Hrs ÷ Total actual work hours posted against Planned Work Hrs × 100 That means → Focus ÷ Actual hours on planned lines only
13	Unplanned %	Unplanned Actual Hrs ÷ Total Actual Hrs × 100
14	Compliance	Day compliance/status code

Example of Unplanned%:

Planned/Unplanned	Work Allocation by RO	Actual Posted
Planned	8:00	6:00
Unplanned	NA	2:00
Total	8:00	8:00

Unplanned % = $2 \div 8 \times 100 = 25\%$

This tells management the meaningful question: **“What percentage of the work actually performed today was unplanned?”**

3. Date & Navigation

Default period: **Last 14 calendar days including today.**

Example, if today is **18/08/2026**:

05/08/2026 – 18/08/2026

Provide:

◀ Previous 14 Days | 05/08/2026 – 18/08/2026 | Next 14 Days ▶

Rules:

- Maximum **14-day range** at one time.
- Previous/Next moves the complete selected period backward/forward.
- Do not allow navigation beyond today.
- In grid show all 14 calendar days, not only working days, because missing/non-working dates themselves can be meaningful in a workday review. (Only rows with any signal – timeline, plan, confirmation – still allow empty days via filter)

4. Filters & Grouping

Control	Options
Department	Accessible departments
RO	Accessible Resource Owners
Resource	Accessible resources
Group By	None / Department / RO
Column Selection	Show/Hide grid columns
Download	Excel

Filters must be **hierarchy-aware**. A user must never retrieve another employee through filter/search/export unless that employee falls within their permitted reporting hierarchy.

For **Group By Department/RO**, only visually group the rows. **Do not add averages/subtotals**. That would unnecessarily turn a simple review report into an analytics report.

5. Display Rules

Time fields: **HH:mm**

Hour/duration fields: **HH:mm**

Percentage fields: **0–100%**

Example row:

Date	Employee	Start	Lunch Start	Lunch End	End	Office	Productive	Allotted	Focus	Actual	Focus %	Unplanned %	Compliance
18/08/26	Employee X	09:12	13:05	13:42	18:25	09:13	08:36	08:00	06:20	07:35	79%	18%	C

If a source value is unavailable, display “—” rather than 0.

6. Compliance

C / CD / D / DD / P / L

Reuse existing compliance logic and codes rather than creating new calculation logic specifically for this report. (It is already used in Work Confirmation > Team Compliance as well)

Show below in report page footer as we have shown in Daily Work Detail report :

Confirmation codes: C = Confirmed · CD = Confirmed but Delayed · D = Deviation · DD = Deviation and Delayed · Pending = Pending · Leave = Leave

7. Two small additions I strongly recommend

Employee row drill-down: Clicking Employee or Work Date should open that resource's underlying day detail in Daily Work Detail report with applicable filters of name and date both, **only if such an existing view already exists**. Don't create another detail screen merely for this report.

Sticky Employee + Work Date: Since this is a wide grid, freeze these first two columns while horizontally scrolling. This will materially improve usability.
