

Executive Cockpit — final spec

Structure

- **Role-adaptive landing** (ECP001/002, BR004) — post-login home. Header names the role + scope ("Delivery Head · scoped to your org"); the two-band layout is identical for every role, only the data filters by hierarchy. Auto-refresh shows "latest approved data" + timestamp (ECP003, BR001).
- **Daily · Operational Snapshot** — four always-visible action cards: Attention (→PER), Shortage (→pending demand), Becoming Available (→RDR), Conflicts (→Conflict screen). Conflicts shows the **positive zero state** (green, "All clear") — card stays visible per the exception table.
- **Weekly · Operational Excellence** — Planning Accuracy ▲2 + Confirmation Discipline ▼3, Utilization Trend (8-wk, →RPR), Department Health Ranking (traffic-light, →dept reports), and now **Team Load** as the fourth panel.

Team Load (the addition)

- Per-person load meters with **week-over-week deltas** — Priya over-allocated (96%, ▲6, red), Vikram drifting to bench (62%, ▼8, amber), healthy in indigo. The movement is the signal.
- Header carries the aggregate (avg 80% · ▲3), matching the other weekly cards' trend treatment.
- **Compare week-over-week** drill; rows can hand to Planner to rebalance.

- Pairs left-to-right with Dept Health Ranking — departments, then the people inside them.

Rules & edges baked in

- Every card drills (ECP004/021, BR005); breadcrumb returns to cockpit (ECP022).
- Trend deltas compare to the immediately preceding period (BR003); weekly band uses the configured weekly period (BR002).
- "Pending Calculation" for weekly metrics not yet computed; zero states show positive indicators, never hidden cards.
- **Org Overview survives** as the deeper analytics drill-down (risk & hiring, capacity planning) — one level below the cockpit, not flattened into it.

Responsive note (ECP024) — the weekly band is now three panels; on tablet Team Load wraps below the ranking rather than compressing.
