

Concept - Performance Card

Functional & UI Requirement Note

1. Purpose

Create a single **Performance Card** that consolidates the performance information already available within System.

The Performance Card should help:

- **Individual Resource** understand performance, contribution, strengths, concerns and growth trends.
- **Resource Owner (RO)** review one direct/indirect reportee at a time using the same factual information.

The Performance Card is an **analysis/reporting layer** over existing System data.

It should **not create a new overall Performance Score** or introduce another appraisal mechanism.

2. Access & Resource Selection

When a user opens Performance Card:

- Default selected Resource = **Self**
- Every user can view their own Performance Card.
- If the user is an RO, Resource dropdown should contain:
 - Self
 - Direct reportees
 - Indirect reportees
- Only **one Resource at a time** can be viewed.
- Existing System reporting hierarchy/access logic should be reused.

3. Period Selection

Provide a Period dropdown with:

- This Week
- Previous Week
- This Month
- Previous Month
- This Quarter
- Previous Quarter
- Custom Weeks

Custom Weeks

Show the latest **12 individual week choices**.

User may select one or multiple **continuous weeks**.

Non-continuous week selection should not be allowed.

Previous Period Comparison

Where Current vs Previous comparison is shown, compare against the immediately preceding equivalent period.

Examples:

- This Week → Previous Week
- This Month → Previous Month
- This Quarter → Previous Quarter
- Selected 3 Custom Weeks → immediately preceding 3 weeks

4. Overall Page Structure

Performance Card should contain:

A. Header / Controls

Resource + Period

B. Summary Cards

Five compact performance cards

C. Competency Overview

Behavioural + Technical competencies

D. Work & Productivity

Operational performance metrics

E. Contribution

Project-wise effort and billability

F. Performance Snapshot

Strengths + Needs Attention + Last Quarter KPI Achievement

The page should remain clean, management-friendly and understandable without requiring interpretation of complex analytics.

5. Summary Cards

Show **5 cards in one summary row**.

Every applicable value must show:

- Current value
- Previous comparable period value
- Growth / Decline / Same indicator

Trend visibility is an important part of the Performance Card.

Card 1 — Competency

Show two values within the same card:

Behavioural Competency

- Average Score / 5
- Horizontal progress bar
- Previous period score
- ↑ / ↓ / → indicator

Technical Competency

- Average Score / 5
- Horizontal progress bar
- Previous period score
- ↑ / ↓ / → indicator

Card 2 — Execution Discipline

Show:

Planning Accuracy

- Score %
- Horizontal progress bar
- Previous period value
- ↑ / ↓ / →

Confirmation Discipline

- Score %
- Horizontal progress bar
- Previous period value
- ↑ / ↓ / →

Card 3 — Focus %

Show prominently:

Focus %

Also show:

- Previous period value
- ↑ / ↓ / → indicator

Higher value = positive movement.

Card 4 — Unplanned Work %

Show prominently:

Unplanned Work %

Also show:

- Previous period value
- ↑ / ↓ / → indicator

Lower value = positive movement.

Card 5 — Billable Split %

Show prominently:

Billable Split %

Also show:

- Previous period value
 - ↑ / ↓ / → indicator
-

6. Competency Overview

Show two sections side-by-side where screen width permits:

Behavioural Competencies

Show all 5 configured Behavioural Competencies for the Resource.

Heading should also show:

Average: X.X / 5

For each competency show:

- Competency Name
- Score / 5
- Visual horizontal bar

Technical Competencies

Show all 5 configured Technical Competencies.

Heading:

Average: X.X / 5

For each competency show:

- Competency Name
- Score / 5
- Visual horizontal bar

Period Calculation

For periods containing multiple weekly competency reviews, show the **average score across available weekly feedback within the selected period**.

Do not treat a missing weekly review as zero.

Competency Details

At the bottom of each section provide:

View Details

On click, show the **last 12 weeks** of scores for that respective competency section.

The detailed view should make improvement/degradation across weeks easy to understand.

7. Work & Productivity

Show a compact tabular section.

Metric	Current	Previous	Trend
Planned Hrs	160	154	Improved
Actual Hrs	151	148	Improving
Billable Hrs	100	110	Off Track
Focus Hrs	121	112	Improving

Focus %	80%	76%	Improved
Average Lap Duration	00:25	00:15	Improved
Unplanned Hrs	11	18	Improving
Planning Accuracy	89%	83%	Improved
Confirmation Discipline	96%	91%	Improving
Negative Leaves	2	0	Off Track
Public Appreciation	0	1	Concern
Appreciation	1	3	Concern

Values shown above are illustrative only.

8. Trend Engine

Trend classification must use **3 consecutive comparable periods**.

Four statuses:

Improving

Performance has improved continuously across all 3 comparable periods.

Example:

72 → 76 → 80 = Improving

Improved

Current performance is better than the immediately previous period, but improvement has not been continuous across all 3 periods.

Example:

78 → 74 → 80 = Improved

Off Track

Current performance is worse than the immediately previous period, but degradation has not been continuous across all 3 periods.

Example:

78 → 81 → 76 = Off Track

Concern

Performance has degraded continuously across all 3 comparable periods.

Example:

84 → 80 → 76 = Concern

Metric Direction

Trend interpretation must consider whether **higher or lower is desirable**.

Higher is Better

Examples:

- Focus %
- Planning Accuracy
- Confirmation Discipline
- Appreciation
- Public Appreciation

Lower is Better

Examples:

- Unplanned Hrs / %
- Negative Leaves

For lower-is-better metrics, trend interpretation must be reversed.

Metrics where higher/lower does not inherently represent better performance should not be forced into misleading qualitative interpretation. Their historical values can still be displayed.

9. Metric Drill-Down

Each applicable metric row in **Work & Productivity** should be clickable.

On click:

Show the **last 12 weeks**, including the current week, for that metric.
The drill-down should provide a simple historical trend visualization/data view.
No separate report is required.

10. Contribution

Show project-wise contribution for the selected Resource and selected period.

Example:

Project	Planned Hrs	Actual Hrs	Share %	Billable Hrs
GSP	90	72	48%	32
ABC	20	39	26%	10
Internal	20	25	17%	25
PQR	0	15	10%	15
TOTAL	130	151	100%	82

Share Calculation

Share % = Project Actual Hrs ÷ Total Actual Hrs × 100

Billable Hours must come from the underlying System work/activity classification.

Do not determine billability based merely on Project Name or Project Type.

The purpose of this section is to answer:

“Where did this Resource's effort go during the selected period?”

11. Performance Snapshot

Show one compact section containing three areas:

A. Strengths

Display the Resource's strongest performance areas based on available performance data and trends. (Top 3)

Example:

- Confirmation Discipline — 96%
- Core Understanding — 4.4 / 5
- Planning Accuracy — 91%

B. Needs Attention

Display areas showing comparatively weak or deteriorating performance. (Bottom 3)

Example:

- Customer Governance — 3.2 / 5
- Unplanned Work — 21%

Strengths and Needs Attention should be derived from factual System values/trends and should remain explainable.

Do not generate arbitrary qualitative statements.

12. KPI Achievement

Within Performance Snapshot, show:

KPI Achievement — Last Quarter

Show the Resource's configured KPI list and respective result/achievement for the last completed quarter.

Example:

KPI	Last Quarter Result
-----	---------------------

KPI 1 — Title	Result
---------------	--------

KPI 2 — Title	Result
---------------	--------

KPI 3 — Title	Result
---------------	--------

KPI 4 — Title	Result
---------------	--------

KPI remains quarterly in nature.

When Performance Card is viewed for Week or Month, do not artificially convert quarterly KPI into weekly/monthly KPI.

Always clearly identify it as:

Last Quarter KPI Achievement

13. Missing Data Handling

Performance Card must distinguish between:

Zero and No Data / Not Available

If a value is genuinely zero:

- Show 0

If the metric cannot be calculated because required source data does not exist:

- Show —

Missing competency feedback must not be treated as Score 0.

Missing values should be excluded from applicable averages.

14. UI / Design Direction for FIGR

Performance Card should feel like an **individual management cockpit**, not a long traditional HR appraisal form.

Design principles:

- Desktop-first System design
- Clean and compact
- Strong information hierarchy
- Minimal scrolling where practical
- Summary first, evidence below
- Current vs Previous highly visible
- Trend direction easy to understand
- Avoid excessive charts
- Use horizontal bars where useful
- Tables should remain compact
- Drill-down rather than overcrowding the primary screen
- Avoid decorative analytics that do not help interpretation

The user should be able to understand within a few seconds:

How am I doing?

Am I improving or declining?

Where am I strong?

Where should I improve?

Where did my working effort go?

For an RO viewing a reportee, the same screen should answer:

How is this Resource performing and developing?

15. Important Functional Principle

Do **not** calculate a single combined overall Performance Score such as 82/100.

Behavioural Competency, Technical Competency, KPI, Planning Accuracy, Focus, Billability, Unplanned Work and other measures represent different dimensions and should remain independently visible.

Performance Card should consolidate:

Capability + Execution + Productivity + Contribution + Growth

without creating an artificial appraisal score.

16. Out of Scope

Do not introduce through Performance Card:

- New competency scoring

- New KPI calculation
- Employee ranking
- Department ranking
- Forced bell curve
- Performance grade
- Overall Performance Score
- Salary/increment recommendation
- Promotion recommendation
- New appraisal workflow
- New employee feedback entry

Performance Card consumes and analyzes **existing System information**.

17. Final Performance Card Flow

Resource + Period

↓

5 Summary Cards

Competency | Execution Discipline | Focus | Unplanned Work | Billable Split

↓

Competency Overview

5 Behavioural + 5 Technical

↓

Work & Productivity

Current | Previous | 3-Period Trend

↓

Contribution

Project-wise Planned / Actual / Share / Billable Hours

↓

Performance Snapshot

Strengths | Needs Attention | Last Quarter KPI Achievement

↓

Drill-down where required

Last 12 Weeks

Core Objective

The Performance Card should provide one factual answer:

“How is this individual performing, contributing and progressing based on the work evidence already captured within System?”
