

FRD — Map Employees to Projects Utility

Location : Setup → Projects → Map Employees

Add a “**Map Employees**” button on the Projects page just before Add Project button. This is a lightweight utility and **not a separate menu/page**.

Purpose

Map employees to projects so that during **Work Allocation**, the system can show only the projects applicable to the selected resource.

Expected Work Allocation flow: (This is already in place and working fine. So no need to do any work here. **Select Resource → Select Project → Select Milestone/Activity → Allocate Work**

Therefore, Resource–Project mapping acts as the eligibility layer between **Resource** and **Project**.

Map Employees Utility

Keep the interface simple and compact.

Employee Grid with standard sorting utility.

Show:

Select	Resource Name	Department	Mapped Projects
☐	Employee A	Customer Success	Project Alpha, Project Beta
☐	Employee B	Development	Project Alpha
☐	Employee C	QA	—

Provide basic search/filter for:

- Resource Name
- Department
- Project

Mapping

1. User selects **one or multiple employees** from the grid.
2. Selects **one Project** from a dropdown.
3. Clicks **Map**.
4. Selected employees are linked to that project.
5. Existing mappings must not be duplicated.

Also provide a simple **Unmap** action for removing an existing Resource–Project relationship.

Work Allocation Behaviour

When creating a Work Allocation:

1. **Resource selection remains the first mandatory step.**
2. Project dropdown should show **only projects mapped to that selected Resource**. (Only this step is a new addition due to Resources are mapped to Projects now)
3. After Project selection, subsequent Milestone/Activity selection follows the existing project structure.
4. An unmapped project must not be available for that Resource during Work Allocation.

Access

Mapping should follow existing system hierarchy/access rules.

Keep It Lean

Do **not** introduce:

- Allocation percentage
- Start/end dates for mapping
- Billing status
- Resource capacity
- Approval workflow

This utility has only one responsibility: “**Which Projects can this Resource be allocated work against?**”
